**Comfort and esthetics
are the BPS® standard.**

It is very important to seek professional advice before choosing the denture that best suits your lifestyle. State-of-the-art dentures must be able to restore the light reflecting quality of natural teeth as well as be compatible with the sensitive tissues in the mouth. Dentures should be comfortable allowing the wearer to forget it while eating and speaking. Most importantly, the correct denture will restore a carefree smile to your face.

BPS® – a system of professional expertise and quality products.

Premium quality dentures instill confidence and provide optimum function while eating, speaking or laughing.

With sophisticated instrumentation, all your facial information is recorded to recreate the character of your smile and restore the natural contour of your lips and facial muscles.

Premium Ivoclar denture teeth are used to reflect light through several layers that mimic natural teeth. The quality materials resist wear, chipping and staining.

State-of-the-art equipment is used to form the denture base. The unique Ivocap injection system compensates for the shrinkage of conventional denture bases. This will ensure a great fit that is more comfortable and will enhance eating and speech.

BPS quality dentures are the standard for esthetics, comfort, fit and function. Find out more from your dental practitioner.
